DYNAMIC TORSION TEST FOR THE MECHANICAL CHARACTERIZATION OF SOFT BIOLOGICAL TISSUES

Cuvillier Verlag Mrz 2007, 2007. Taschenbuch. Book Condition: Neu. 207x144x12 mm. Neuware - In this thesis, a novel measurement method for the characterization of the mechanical properties of soft biological tissues is presented. The linear viscoelastic properties are determined through dynamic torsion tests by applying forced torsional oscillations to soft tissue samples. This work presents the definition of the measurement principle, with the design of torsional resonating sensors and the development of analytical and finite elements methods used for the...

Reviews

This pdf will be worth buying. Better then never, though i am quite late in start reading this one. I am easily can get a enjoyment of reading through a published book.

-- **Paul Ankunding**

The publication is great and fantastic. It really is simplistic but surprises within the 50 % from the publication. Your daily life span will be change when you comprehensive reading this article book.
