The third property of this ideal explosive is its plasticity. Gelatins are physically similar somewhat to well-worked putty, and can be molded, sliced and worked into seams and fissures in the rock and expanded by means of a suitable tamping stick to fill all the cracks and crevices, excluding air spaces and increasing the effective force of the explosive accordingly. It stays where it is ut. p A new Gelatin has lately appeared upon the market having all the desirable features of its well-known predecessors, but having the additional virtue of a very low freezing point. It is just as plastic, dense, waterproof and reliable as former Gelatin explosives. It is no more difficult to explode and is just as agreeable to handle. The freezing point of all nitroglycerine explosives is never exactly fixed, but varies somewhat with physical conditions. The new Gelatin which is known as Du Pont Gelatin, will not freeze above 32 F. , while it has been known to withstand temperatures below zero for several weeks without freezing, although such extreme resistance to cold is not expected of it. In ordinary quarry work, a Gelatin which will withstand ice-cold water without freezing is about all the most exacting quarryman can ask. At the quarry of the Lee Lime Company, Lee. . lass. , a blast was made recently using this Du Pont Gelatin in a ledge of dolomite. This rock is used for making a high-grade chemical...
