

## Evaluation of the Geologic and Hydrologic Factors Related to the Waste-Storage Potential of Mesozoic Aquifers in the Southern Part of the Atlantic Coa (Paperback)

Filesize: 2.98 MB

### ***Reviews***

*This pdf is great. It really is rally intriguing through studying time period. I am just quickly could possibly get a satisfaction of reading a written pdf.*  
*(Roosevelt Braun)*

## **EVALUATION OF THE GEOLOGIC AND HYDROLOGIC FACTORS RELATED TO THE WASTE-STORAGE POTENTIAL OF MESOZOIC AQUIFERS IN THE SOUTHERN PART OF THE ATLANTIC COA (PAPERBACK)**

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.The report describes the subsurface distribution of rocks of Cretaceous to Late Jurassic ( ) age in the Atlantic Coastal Plain, South Carolina, and Georgia, and examines their potential for deep-well waste storage into th part of the regional sediment mass which lies below the deepest zones containing usable ground waters. For the study, usable ground water is considered to be that which contains less than 10,000 mg/L dissolved solids. Using a group of geohydrologic parameters derived from or combining 21 categories of basic data, established from study and interpretation of well cuttings and geophysical logs, a series of 32 regional maps and 8 stratigraphic cross sections was constructed. For each of the eight geologic units delineated in the subsurface, the maps illustrate the distribution of waste-storage potential in terms of areal extent, depth below land surface, sand-shale geometry, and the approximate sodium chloride concentration of a unit s nonusable ground water. In areas where the geologic units contain nonusable ground water, the depth below land surface and the thickness of potential waste-storage reservoir and reservoir-seal combinations are variable. The range in variability appears to be broad enough to meet the need for a wide choice among the geologic requirements that would normally be considered in selecting specific waste-storage sites for detailed examination.
