

## Mathematical Questions and Solutions in Continuation of the Mathematical Columns of The Educational Times Volume 54 (Paperback)

Filesize: 1.89 MB

### ***Reviews***

*This book is definitely not effortless to begin on reading through but extremely fun to read. Sure, it can be enjoy, continue to an amazing and interesting literature. I realized this book from my dad and i recommended this pdf to understand.*

*(Ezequiel Schuster)*

## MATHEMATICAL QUESTIONS AND SOLUTIONS IN CONTINUATION OF THE MATHEMATICAL COLUMNS OF THE EDUCATIONAL TIMES VOLUME 54 (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: .radius vector. Any one of these curves can be drawn to have four-pointic contact with a given curve at any point, and, if the curve be such that the pole of the osculating spiral (S) lie always on the radius vector, the locus of S will be the inverse of the given curve with respect to the origin. If the chord of curvature through the pole be  $kr$ , it will be found that  $dp/ds = (k-1)\cot \angle OPY$  (when S lies on OP), whence  $r^2 = a^2 - p^2$  will be the equation for a curve such that the locus of the pole of the osculating spiral is the inverse, with respect to the circle  $r = A^2$ , of the curve. If the constant term in this equation be omitted, it is the equation between  $r$  and  $p$  for the spiral. Perhaps the equation would be better, written in the form  $r^2 = a^2 + (p/c)^2 + V$ , since  $k = 2$  (the equiangular spiral) would give  $r^2 = p^2 + A^2$ , or the involute of a circle which is only a particular case. If we put  $k = -2$ , the osculating curve is the rectangular hyperbola, and the curve is a central conic. That is, if the rectangular hyperbola of four-point contact be drawn at each point of a central conic, the locus of its centre (the pole in this case) is the inverse of the conic with respect to the director circle. No doubt, other particular cases may be readily investigated, such as...
